Patents held

Patents associated with the central vacuum units

- APF system Italy no. MO2009A000293
- APF system USA Patent no. 12/066,592
- QB built-in vacuum system Italy - Europe no. MO2007A000077

Patents associated with vacuum sockets

- New Air vacuum socket Patent no.1267007
- Air socket frame for vacuum socket Patent no.1267008

These certifications and patents ensure the quality of Aertecnica products.

Certifications and partner companies

Aertecnica is certified to UNI EN ISO 9001 Quality Management and UNI EN ISO 14001 Environmental Management standards

Product certification for single-phase central vacuum units for the residential sector: Perfetto Inox - Perfetto - Classic - Bravo - QB - Perfetto Inox TXA - Perfetto TPA - Perfetto TP - Classic TC - Studio TS80 - TS105

The central vacuum units for the residential sector and service sector, as well as the vacuum sockets and socket frames, are 100% made in Italy.

The central vacuum units for the residential and service sectors, the sockets and socket frames are compliant with EC standards.

For pipes and connectors Ø 50 - Ø 63

For pipes and connectors Ø 40 - Ø 80 - Ø 100

Certification for Brazil for central vacuum units for the residential sector: Perfetto TXA, Perfetto TPA - TP, Classic TC, QB, Studio TS

Before being released into the marketplace, the central vacuum units for the residential and service sectors, as well as the vacuum sockets, must pass strict quality, safety, environmental and aesthetic tests. Our exclusive manufacturing process creates unique products in terms of quality and efficiency.

Certification for Canada and the USA for central vacuum units for the residential sector: Perfetto TXA, Perfetto TPA - TP, Classic TC, QB, Studio TS N°. DMLW.E345064 - DMLW7. E345064

Think Clean

Aertecnica has been building its company history around the concept of a clean world since 1985: "think clean" is our company philosophy, for the health and well-being of all.

We began designing and manufacturing advanced Central Vacuum Systems in 1985. Our systems eliminate dust and improve the quality of the spaces we live and work in. Aertecnica employs technology to meet the recommendations of the World Health Organisation (WHO) and is also sensitive to environmental issues, engaging in continuous research to improve well-being. Attention to health and the environment is combined with constant technical research: the TUBO system is developed around the most up-to-date solutions that exist today.

Aertecnica is a company that "Thinks Clean", improving peoples' well-being and looking optimistically towards a healthier future.

Here at Aertecnica we understand our role in society and our place in an environment that can no longer support inappropriate technological developments and the products derived from them.

TUBO
Airway to Comfort

We live
in a unique world

Aertecnica's production is environmentally sustainable, just like its philosophy: "Think Clean".

All Aertecnica products are of a "global quality", certified by the most prestigious institutes. All this takes place with maximum respect for the environment and the people who work for us. We carefully monitor our atmospheric emissions and make sure we provide safe, well-lit and airy working environments.

Over the years Aertecnica has followed a path of progressive development, becoming a market leader by offering ever increasingly advanced solutions. Aertecnica is the first company in its sector to have acquired both **ISO 9001 and ISO 14000 COMPANY and ENVIRONMENTAL certification**, CCC certification to distribute its systems in China and cULus certification for exporting TUBO to the USA and Canada. This commitment is an extension of our environmental values. We aim to improve the quality of air in our rooms, to protect peoples' health (increasingly threatened by allergies and respiratory problems) and improve peoples' well-being: this is what Aertecnica aims to achieve when designing its systems. The company continues to grow in a way that is both environmentally friendly and respectful of our employees.

Aertecnica effectively combines entrepreneurial and ethical values.

Aertecnica's commitment is also an expression of its strong links to its home territory, in which it aims to become a solid economic and social point of reference.

This vision favours relationships with the local community, in particular with those who work hard everyday and are fundamental partners in our company's success. Success and environmental awareness can also be found in our manufacturing processes.

Aertecnica designs and manufactures most of the parts used in the TUBO system directly. In this way we can make sure that the materials used are safe and appropriate for use in the places where we spend most of our time.

TUBÒ a great way to get fresh air

Modern and technological, clean and respectful of the environment we live in: the home according to TUBÒ.

TUBÒ is a Central Vacuum System. It is comprised of floor-mounted hoses, wall sockets and a central vacuum unit located in a separate service space, which vacuumed dust is piped into. Using this system, bacteria and micro dust, the main causes of allergies and respiratory diseases, are not recirculated into the air.

TUBÒ, vacuum by nature

Clean and silent: these are TUBÒ's attributes

TUBÒ guarantees a high level of cleanliness with silent operation: the central vacuum unit, installed in a service space or externally, enables the system to be used in complete freedom at any time.

In all corners, with ease

The flexible, light-weight and manageable hose ensures maximum functionality and easily reaches every corner of the home. Sockets are located in every room, eliminating the difficulties encountered when using traditional portable vacuum cleaners.

Bacteria and micro dust out

TUBÒ protects your health by deeply cleaning and sanitising your home. Dust is vacuumed and any recirculation of bacteria and micro dust is completely eliminated.

TUBÒ power

TUBÒ's vacuuming power is greater than that of a conventional vacuum cleaner: in this way, your home will benefit from more complete, long-lasting cleanliness.

Technology for the home

TUBÒ completely redefines the concept of home hygiene, making it suitable for the needs of modern life.

This is why architects and designers in Italy and abroad enhance their home designs by recommending the use of TUBÒ: to date, over a million satisfied users have installed the system.

Allergies: here is the solution

The spaces we live in, which are increasingly sealed off to save energy, accumulate a large amount of dust that contains bacteria and dust mites. TUBÒ eliminates them from our homes and respiratory tracts.

Wellness you can breathe

Dust mites are the main cause of the most common respiratory problems. In particular they are responsible for a troublesome allergy caused by the mere presence of these microscopic organisms that invade our living space. According to recent university studies *the use of Central Vacuum Systems dramatically reduces the amount of allergens in the air, and consequently the illnesses related to them*, such as: watery eyes and runny nose, colds, breathing difficulties and asthma. This is because Central Vacuum Systems, unlike traditional vacuum cleaners, completely eliminate the recirculation of micro dust. This is thanks to greater suction capacity and most of all thanks to the fact that the vacuumed air is never reintroduced into the rooms being cleaned.

Eliminate dust, completely

Dust accumulates very quickly and is resistant to conventional cleaning systems: some cleaning methods, such as sweeping or conventional vacuuming, do not completely remove dust and other related pollutants. They may even accentuate the danger, releasing the lightest, most dangerous particles into the air, making them easily breathable.

Central Vacuum Systems like TUBÒ by Aertecnica, are the only systems that completely remove dust and allergens. This is because the dust is collected into a central vacuum unit located in a service area separate from the one you are cleaning, thus preventing dust recirculation.

The TUBO system

Installing a Central Vacuum System doesn't mean just finding an excellent functional cleaning solution, it is above all an investment in your health and well-being. Breathing micro dust all the time is something

we often do not realise we are doing. Though non-toxic, over the long-term it can irritate our respiratory tracts and cause allergies, thus worsening our health and general well-being. A Central Vacuum System, unlike a traditional

vacuum cleaner, eliminates micro dust recirculation completely, reducing allergens present in the air.

Automation enters the home

Aertecnica was the first to manufacture in Italy. And we continue to be first, with lots of technological innovations both large and small.

TUBÒ | Link

MyTubò

- **CONTROL DISPLAY** electronic message system for system status and REMOTE message panel, which is now the DYNAMIC CONTROL DISPLAY.
- **My Tubò App** and the **TUBÒ | Link** (Cod. CMT820) accessory, you will be able to monitor the situation of your central vacuum unit whenever you wanted to do it. My Tubò has been designed so that you can easily reset and view all main functions of your central TUBÒ* vacuum unit even remotely and from any location, using your iPhone, iPad or Android device. Perfect for anyone who is away from home but needs to have the situation under control. Download the free My Tubò App and stay connected to your TUBÒ central vacuum unit.
- **POWER CONTROL** system for vacuum power.
- **SOFT START** system, an electronic control device that starts the motor gradually, providing energy savings and avoiding power surges to protect the life of the appliance.
- The first built-in central vacuum unit for Central Vacuum Systems: QB (patented central vacuum unit).
- Dust inlet and air expulsion on both sides of the central vacuum unit in order to simplify installation.
- The **APF System** (self-cleaning filter system), makes it possible to reduce filter maintenance operations, keeping the central vacuum unit's suction capacity at optimal levels for longer. This is based on an Aertecnica patent that uses the vacuumed air to activate a fan that activates a vibration mechanism, which makes even the finest dust particles detach from the filter and fall into the container.
- **CLEAN BAG** dust collection bag, which is designed with an air-tight closing system, COMPLETELY PREVENTING direct contact with dust.
- **QUICK FIX** bracket with front attachment system that makes installation easier and improves the stability of the central vacuum unit's attachment to the wall.
- **MODBUS** communication system: A generic ModBus protocol has been implemented in the central vacuum unit, which allows it to be interfaced with the most common automation systems.

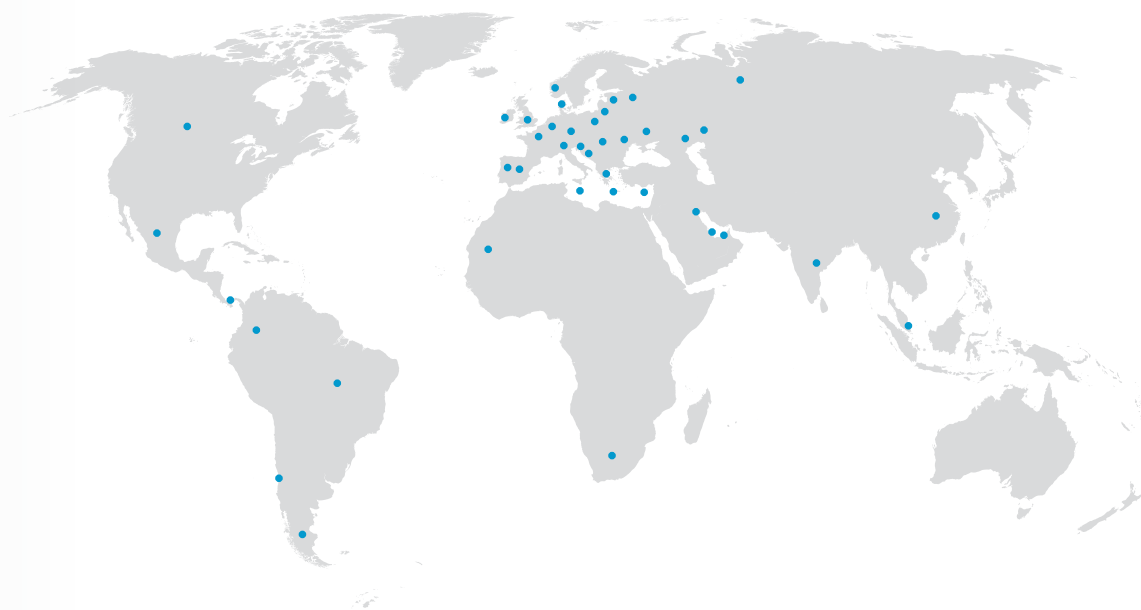

A company open to the world

Aertecnica is currently represented in more than 40 countries throughout the world, and grows every year through its network of exclusive distributors.

In order to grow, companies must focus on product innovation, however, they should also be able to communicate a philosophy of important values. Aertecnica takes a global view and shares a new way of experiencing the home.

A leading service provider

Aertecnica is a market leader in Italy. We have a clear vision of our role and company mission. It pays attention to every single detail, before and after selling its products. It pays attention to new market demands

A leading service provider

Our technical support service can provide the correct response to any request, providing the necessary support for architects, designers and installation technicians. Our technical support service holds weekly courses in-house to train designers, installation technicians and service centres. Our attention to detail does not end with the conclusion of the sales process, but continues with precise and prompt responses to any requests from end users.

A market leader

We have a clear vision of our role and company mission. The reliability of our products and organisation has been recognised over the years by end users, installers and distributors. Our market decisions are always clear and transparent. Thousands of satisfied users are the best form of advertising.

Product leader

Due to the professionalism and sensitivity of our employees, we are able to quickly understand the new demands of our users. Through research and development we are able to transform these demands into new products. Our products are not just the result of continuous research, but also of years of experience, and are therefore extremely reliable.

Aertecnica services

Designed and set up to help cleaning professionals but also end customers: preliminary estimate, feasibility study, implementation planning, technical assistance for system installation, repairs, testing, delivery. Aertecnica's TUBO vacuum system is advanced in these areas as well.

After sales service - Italy

Aertecnica also offers clear and precise answers after purchase and installation. A dedicated team is available for the end customer, for any needs or requests for assistance.

Research and development

Every day Aertecnica experiments, invents and checks. Its R&D department:

- designs new products;
- tests new materials and components;
- tests central vacuum units;
- analyses and experiments with new products;
- checks component life.

The range

Aertecnica offers a complete range of products for its TUBO vacuum system: single-phase central vacuum units (traditional and built-in), three-phase central vacuum units, vacuum sockets, electronics, cleaning accessories and spare parts.

Professional courses for installation technicians

At Aertecnica's head office in Italy, "PROFESSIONAL" courses are held periodically for all products in our new training room. These courses are aimed at installation technicians that wish to gain a better understanding of the TUBO system. Participants receive an attendance certificate. The courses are completely free of charge and are held by qualified Aertecnica personnel. Contact the Aertecnica secretary's office or sales office for course dates.

TUBO®
Airway to Comfort

The new
conception
of advanced
vacuum
systems.

The new generation of TUBÒ central vacuum units: TXA - TPA - TP - TC

Research, innovation, technology, reliability: Aertecnica's history has always been based on the desire to offer the highest quality products that symbolise Made in Italy workmanship.

Simply perfect

Technology, design, practicality: a perfect balance

The new Tubò system central vacuum units made by Aertecnica are completely designed and built in Italy, a philosophy which is the basis of all the projects we have developed in the last 30 years.

Consolidated manufacturing procedures and a strong commitment to research and development allow us to perfect and test all products in terms of technical, functional and aesthetic performance.

The new generation of central vacuum units in the TUBÒ line blends Aertecnica standards with the style and harmony that today's demanding market requires.

All this is the result of a constant commitment to test new technologies on a daily basis, to create healthier environments and more comfortable living spaces.

Aertecnica: cleanliness and well-being for everyone.

watch the video and discover the central vacuum units in the TUBÒ vacuum system

Perfetto Inox TXA line

Not just beautiful

The Perfetto Inox TXA line combines the best technical and functional features with the elegance of an advanced design and the endurance of AISI 304 stainless steel.

These features are perfect for installations in which the machine must be positioned outside or in a place with particularly difficult environmental conditions.

The Perfetto Inox TXA line achieves an optimum balance between technology, design and endurance, thanks to many functional features that help both the installation technician and the end user.

Design

A new style and captivating image with strong lines. Real beauty, functional design and aesthetics that go beyond a simple trend. Durable materials.

Dual air expulsion (right and left)

A new feature that allows maximum flexibility of installation, regardless of the position of the central vacuum unit.

IP electrical protection

The TXA central vacuum units are certified with a high degree of protection based on the model (see technical charts).

Silent operation

Thanks to the use of new material and the optimisation of the motor's technical compartment, the noise level has been reduced even further.

Instant AVI display

Positioned on the front of the central vacuum unit. This is an instrument that provides clear indications that are easy to understand thanks to a set of icons and parameters that instantly signal the operational status of the central vacuum unit.

ModBus communication system

The TXA central vacuum units have a ModBus communication system that can be interfaced with the most common home automation systems.

High degree of resistance to atmospheric agents

The central vacuum unit is made of AISI 304 stainless steel, which not only creates an aesthetic impact, it also eliminates almost all deterioration caused by atmospheric agents and wear.

Dual dust inlet

Option to connect the tubing to the central vacuum unit on both the right and left sides.

Built-in vacuum socket

The TXA central vacuum units have a built-in vacuum socket on the front of the machine.

APFSystem (Self-cleaning filter system)**

An innovative and patented system that collects dust through vibration; standard equipment for the TXA line. It reduces maintenance work and keeps the central vacuum unit's suction capacity at optimal levels for longer.

Quick Fix bracket

The Quick Fix bracket with front attachment system makes installation possible in very small spaces and improves the stability of the wall mounting.

Multifunctional side pockets

Practical and convenient for storing the installation manual and spare bags. (not included with model TX1A)

Ergonomic handles

The handles make it easier to open and unhook the dust container.

Clean Bag

Dust collection bags with an air-tight closing system that completely prevents direct contact with the dust.

Dust container

A simplified hooking and unhooking system, with the option to partially open the container to activate the Clean Bag air-tight closing system.

Clean Bag locking system

Rapid system for attaching the Clean Bag to the dust container with pressure clips.

Tubò | Link (cod. CMT820)

This electronic tool allows you to monitor and reset the centralized vacuum cleaner system "TUBÒ" in real time from anywhere and at any time, thanks to the possibility of connection via Wi-Fi or Remote.

The check is carried out via iPhone, iPad or Android device using the free Aertecnica App: My Tubò.

Aertecnica combines aesthetics with technical sophistication to satisfy the end user, without forgetting the needs of installation professionals.

Perfetto TPA - TP line

The evolution of the concept of vacuuming

The Perfetto TPA – TP line represents a new conception of advanced vacuum systems.

It is a versatile and user-friendly work tool that was created to satisfy the functional needs of our dynamic and modern customers, allowing both the installation technician and end user to interact with the machine in a simple and direct manner.

Functionality-oriented design

The Perfetto TPA – TP line achieves an optimum balance between technology and design, thanks to many functional features that help both the installation technician and the end user.

Dual air expulsion (right and left)

A new feature that allows maximum flexibility of installation, regardless of the position of the central vacuum unit.

IP electrical protection

The TPA – TP central vacuum units are certified with a high degree of protection based on the model (see technical charts).

Silent operation

Thanks to the use of high quality materials and the optimisation of the motor's technical compartment, the noise level has been reduced even further.

Instant AVI display

Positioned on the front of the central vacuum unit, this is an instrument that provides clear indications that are easy to understand thanks to a set of icons and parameters that instantly signal the operational status of the central vacuum unit.

ModBus communication system

The TPA and TP central vacuum units are equipped with a ModBus communication system that can be interfaced with the most common home automation systems.

Dual dust inlet

Option to connect the tubing to the central vacuum unit on both the right and left sides.

Built-in vacuum socket

The TPA and TP central vacuum units have a built-in vacuum socket on the front of the machine.

APF system (Self-cleaning filter system)

An innovative and patented system that collects dust through vibration. It reduces maintenance work and keeps the central vacuum unit's suction capacity at optimal levels for longer. (TPA models only)

Multifunction side pockets

Convenient and practical for storing the installation manual and spare bags. (Not included with models TP1A – TP1)

Clean Bag

Dust collection bags with an air-tight closing system that completely prevents direct contact with the dust.

Dust container

A simplified hooking and unhooking system, with the option to partially open the container to activate the Clean Bag air-tight closing system.

Clean Bag locking system

Rapid system for attaching the Clean Bag to the dust container with pressure clips.

My TUBÒ

Classic TC line

Simple and beautiful

AerTECNICA offers a line of models suited to everyone's needs.

The Classic TC line is a "basic" line that offers the main technical features essential to the central vacuum units in the TUBÒ system.

Simplicity combined with AerTECNICA standards: The TC Classic offers some of the technological innovations featured in the most advanced models.

Design

An image with a simple design, which maintains the lines of the TUBÒ system central vacuum units. Durable materials.

Dual air expulsion (right and left)

Allows maximum flexibility of installation, regardless of the position of the central vacuum unit.

IP electrical protection

The central vacuum units in the TC line are certified with a high degree of protection based on the model (see technical charts).

Silent operation

Thanks to the use of high quality materials and the optimisation of the motor's technical compartment, the noise level has been reduced even further.

Timed AVT display

Positioned on the front of the central vacuum unit, this is an LED display panel that allows you to constantly monitor the operating status of the central vacuum unit.

ModBus communication system

TC central vacuum units are equipped with a ModBus communication system that can be interfaced with the most common home automation systems.

High degree of resistance to atmospheric agents

The central vacuum unit is made from highly resistant material that has been applied with a coating that is guaranteed and certified for 1000 hours of saline mist. It can also be installed outside.

Dual dust inlet

Option to connect the tubing to the central vacuum unit on both the right and left sides.

Quick Fix bracket

This bracket with front attachment system makes installation possible in very small spaces and improves the stability of the wall mounting.

Ergonomic handles

The handles make it easier to open and unhook the dust container.

Dust container

Simplified hooking and unhooking system.

APF system

Self-cleaning filter system

The APF system is available on the PERFETTO, TXA and TPA models. Europe Patent Pending no. 06793421.6

The APF System is an innovative and patented system that uses vibration to reduce dust.

The self-cleaning system is self-powered by the air drawn into a containment chamber equipped with a helicoidal turbine. A mechanical device connected to this vibrates the cartridge, allowing the dust to fall into the collection container.

It reduces maintenance work on the filter and keeps the central vacuum unit's suction capacity at optimal levels for longer.

a The heart of the system

- 1 **Dual air expulsion (right/left)**
Allows maximum flexibility of installation, whatever the position of the central vacuum unit.
- 2 **Protection rating**
The central vacuum unit is made from highly resistant material that has been applied with a coating that is guaranteed and certified for 1000 hours of saline mist. Can be installed anywhere, both outside and inside. High degree of protection according to model. (see technical chart)
- 3 **Evolution Card 1.0**
This circuit board is the heart of the whole system, it drives the motor start-up and the AVI display. A special programme communicates with the display, which uses icons and parameters to signal the operational state of the central vacuum unit. (standard equipment for TXA – TPA – TP models)
- 4 **Electric motor**
Protected, insulated and sound-proofed. Highly professional, guaranteeing elevated performance. 100% Italian technology.
- 5 **Temperature sensor**
Monitors the operation of the central vacuum unit and intervenes in the event of malfunctions caused by incorrect usage.
- 6 **Sound-proofed chamber**
Built with technologically advanced materials, the channelling circuits use special geometries to further lower the acoustic emissions of the central vacuum unit, allowing you to use it at any time of day.
- 7 **Instant AVI display**
Positioned on the front of the central vacuum unit. This device is characterised by a cutting edge design with very simple parameters and icons. (only with Perfetto INOX TXA | Perfetto TPA | Perfetto TP lines)
- 8 **Modbus communication system**
A generic ModBus protocol has been implemented in the central vacuum unit, which allows it to be interfaced with the most common home automation systems.

*IP55 channelled air expulsion based on the model (see technical data)
IP43 direct expulsion from the central vacuum unit.

b Vacuum everywhere

9 Dual dust inlet (right and left)

A great advantage for the installation technician. Ensures maximum flexibility of assembly of the central vacuum unit in every position, making installation faster.

10 Built-in vacuum socket

A socket built into the central vacuum unit body allows the system to be used also in the room it is installed in. This increases versatility and practicality. (standard equipment for TXA – TPA – TP models)

11 Precision filter cartridge

An innovative product made of washable material with high filtering efficiency. Equipped with an alignment and fastening system, which makes installation and maintenance easier.

12 APFsystem

The APF system (Self-cleaning filter) noticeably reduces filter maintenance, and allows the central vacuum unit to operate at optimal levels for longer, thanks to a filter that is always clean. The APF System is an Aertecnica patent that uses the air aspirated by the motor to activate a fan that starts a vibration mechanism acting upon the filter. This system makes even the finest dust particles fall into the collection container. (standard equipment for TXA – TPA models)

13 Quick Fix bracket

Bracket with front attachment for a larger support surface. Requires minimal installation space and offers greater stability in securing the central vacuum unit to the wall.

14 Multifunctional side pockets

Convenient and practical for storing frequently used objects such as bags and instruction/maintenance manuals. (not included with TX1A, TP1A, TP1 models and Classic TC line)

*IP55 channelled air expulsion based on the model (see technical data)
IP43 direct expulsion from the central vacuum unit.

c Everything is easy with Perfetto

15 Conveying cone

This is built-in and secured to the machine body. It improves and speeds up the Clean Bag closure. Thanks to its new deeper shape, more dust can be collected without it spreading throughout the machine body. The filter is kept clean in this way, providing longer-lasting performance.

16 Dust container

The container is made of highly durable material. A rapid hooking/unhooking system for the Clean Bag has been installed internally. Ergonomic handles have been secured to the sides for easier opening and closing of the Clean Bag.

17 Ergonomic handles

Charming and functional. Two opening positions:

- The first partially unhooks the container from the machine body, allowing the closure of the Clean Bag and completely avoiding contact with dust.
- The second completely unhooks the container from the machine body for all ordinary maintenance operations.

18 Clean Bag locking system

A system is installed inside the dust container (on the bottom plate) that makes it possible to hook the Clean Bag to the dust container using pressure clips.

19 Clean Bag dust bag

Thanks to the handle system, replacing the Clean Bag is fast and easy and above all 100% hygienic, providing the user with a hermetic closure that completely avoids any contact with dust. (Classic TC line excluded)

*IP55 channelled air expulsion based on the model (see technical data)
IP43 direct expulsion from the central vacuum unit.

AVI Display and Dynamic Control Display: everything under control

Aertecnica's advanced TUBÒ vacuum systems are an integral part of the tools that make our living spaces healthier and more comfortable.

The instant AVI display* is Aertecnica's answer to home automation, consisting of a remote Dynamic Control Display, which can be positioned in any part of the building.

The Dynamic Control Display is aesthetically similar to any other electrical switch, allowing for perfect architectural integration.

Both the AVI display as well as the Dynamic Control Display offer a global overview of the operating parameters via clear and comprehensible icons that report any malfunctions or blocks, any required maintenance and the status of the central vacuum unit during operation.

The Dynamic Control Display, Code CMT800, is an instrument that provides clear indications that are easy to understand. It uses a set of icons and parameters that instantly report the operational status of the central vacuum unit. It is equipped with a reset function that automatically resets the system without having to access the machine in the event of a malfunction.

The Dynamic Control Display automatically configures itself to the type of central vacuum unit it is connected to.

DYNAMIC CONTROL DISPLAY

- a** Clean Bag full
- b** Precision filter cartridge saturated
- c** Central vacuum unit ON indicator
- d** Operating vacuum level indicator
- e** Operating parameter display (operating vacuum)
- f** Navigation buttons
- g** Menu button
- h** Reset button

Code CMT800*

Description Dynamic Control Display

Selecting Modbus mode allows you to use the Dynamic Control Display with the following central vacuum units: PERFETTO INOX TXA-PERFETTO TPA-PERFETTO TP-CLASSIC TC. Selecting LM (Local Memory) mode allows you to use the Dynamic Control Display with the following central vacuum units: QB-STUDIO TS-C500. Compatible with the electrical switch plates of the most prestigious brands available on the market. Electrical switch plate not included.

* The AVI display is only supplied with the Perfetto Inox TXA, Perfetto TPA and TP central vacuum units

My Tubò + TUBÒ | Link

TUBÒ | Link dialogues with the Free My Tubò app for smartphones and tablets.

AERTECNICA has always created trends and continuously developed consumer products advanced reflecting the needs and demands of its customers.

Smart Home technology is the latest trend of an evolved market and TUBÒ | Link represents cutting-edge technology.

App. My Tubò (free)

Thanks to My Tubò you can receive notifications on the status of the central vacuum unit or on any problems encountered during its operation in real time. By adding the TUBÒ | Link accessory (cod. CMT820) to your central vacuum unit*, your smartphone will double up as a handy remote control device.

My Tubò allows you to check quickly the usage history of your TUBò central vacuum unit, for a really control total.

With TUBÒ | Link e My Tubò: Always Connected

TUBÒ | Link (Cod. CMT820) is the device that allows you to monitor and reset your TUBò central vacuum system in real time, from anywhere and at any time, thanks to the possibility of connection via Wi-Fi or Remote.

With this simple accessory the central vacuum units can be monitored and reset remotely, simply from your iPhone, iPad or Android device via the My Tubò App.

Go to the site: www.tubolink.com for more information.

Each central vacuum unit is provided with the following components and accessories

Components provided with TUBÒ system single-phase central vacuum units

Rubber sleeve

Quick Fix bracket fastening kit

Grille for direct air expulsion

Nylon bands

Cap for channelled air expulsion

Silencer for air expulsion not included with models TX1A TP1A - TP1 - TC1

Wireless kit for starting/stopping the central vacuum unit Code CM187T

This kit is comprised of a flexible hose with an ergonomic handle (A) that includes the transmitting device, as well as a receiver (B), which should be positioned near the central vacuum unit.

Cleaning is fun without wires

Home automation enhances the TUBÒ system with the wireless kit, the ideal solution for all situations where no power supply is present.

Allows you to switch the central vacuum unit on or off directly from the hose (C)

Code	CM187T*
Description	Wireless kit for starting/stopping the monophase central power unit Perfetto Inox TXA - Perfetto TPA - Perfetto TP - Classic TC, complete with receiver and 9 mt flexible hose Ø32, with ergonomic handle and transmitter.

*To be used in systems without electrical connection to the vacuum sockets.
For single-phase central vacuum units: PERFETTO INOX TXA PERFETTO TPA-PERFETTO TP-CLASSIC TC.

Simple and easy to use, wireless technology makes it possible to use TUBÒ in any system.

 - 1 Ø 32 dusting brush
 - 1 Ø 32 brush for mattresses and upholstery
 - 1 chrome-plated telescopic extension

QB

with built-in enclosure

Technology that simply evolves.

QB complies with EC directives on safety, efficiency and electromagnetic compatibility. Aertecnica's manufacturing procedures are structured to reduce environmental impact, limiting energy use and excess industrial waste.

watch the video and see how QB works

QB with built-in enclosure

outdoor solution

Attention to space, aesthetics and energy savings.

QB can be installed anywhere without compromising the technical features of a traditional centralised vacuum system.

QB completely neutralises the visual impact of traditional interior or exterior central vacuum units: the growing demands of the world of design and working in constant synergy with architects led Aertecnica to develop a product that would satisfy the aesthetic demands of end customers, without compromising technology or ease of installation.

QB the central vacuum unit

Versatility, efficiency and ease of assembly: QB, the first central vacuum unit that can be either built-in or wall-mounted, is a new development that further enriches TUBÒ, the centralised vacuum system.

Innovative and completely accessible for inspection.

It has a cyclonic compartment with deflectors for channelling the dust and an oval filter cartridge with a high filtering capacity. A single element encloses and isolates the central vacuum unit with a magnetic fastening system that speeds up maintenance operations. QB is a highly innovative and patented product that features the very best of Aertecnica technology. It is compliant with acoustic and thermal standards without compromising on **the energy efficiency class or the acoustic and thermal insulation of the structure.**

*QB Q200 Aertecnica patented central vacuum unit**

- a revolutionary central vacuum unit
- maximum vacuum power
- cyclonic dust collection compartment and removable, eco-friendly cardboard dust container
- absolutely silent (dB 58)
- simplified maintenance
- highest electrical protection class (IP55)¹
- reduced footprint

QB with built-in enclosure

indoor solution

A perfect balance between technological innovation and design.

The central vacuum unit disappears, just like the dust. QB eliminates the visual impact of traditional central vacuum units.

QB with built-in enclosure is the solution to **modern building needs**. It can be completely built into the wall to save **space and maintain the building's aesthetics**.

The flap is the only visible element and this can be painted to match **the colour of the wall, making it almost invisible**.

QB with built-in enclosure

The central vacuum unit disappears, just like the dust.

QB with built-in enclosure is the solution to modern building needs. It can be completely built into the wall to save space and maintain the building's aesthetics. The visible flap can be painted the colour of the wall, making it almost invisible.

QB with built-in enclosure

Design

The design is easy on the eye. Light, elegant and minimal, it is characterised by a balance of details that make the QB a perfect fusion of style and technology.

This is not all: the enclosure and flap can be painted to match the walls. In this way the QB becomes a discreet presence that integrates easily into your home.

Super silent operation

The QB is a perfect combination of elements that when assembled together ensure minimum noise levels, allowing you to use the central vacuum unit at any time of day.

QB is compliant with acoustic and technical standards without compromising on the energy efficiency class or the acoustic and thermal insulation of the structure.

Simple and quick to maintain

Thanks to the revolutionary elliptical cyclonic filtration system (patented), QB compacts the dust to reduce maintenance operations to a minimum.

With the QB, cleaning the filter and emptying the dust is easier and quicker than ever. To reduce the size even further, the device is opened from the front; just remove the flap to access the central vacuum unit. A simple and rapid gesture.

The enclosure

- a1. insulation
- a2. built-in enclosure
- a3. temporary flap to preserve plasterwork

The central vacuum unit

Code	CM200Q
Description	QB Q200 central vacuum unit

Code	CM821Q
Description	Frame and flap kit for BUILT-IN enclosure in high-strength plastic (code CM021Q). <ul style="list-style-type: none"> The kit includes the final frame and flap for sealing the BUILT-IN enclosure in high-strength plastic (code CM021Q).

Features

Small size, advanced performance.

Smaller size and higher performance materials, these are the elements that characterise the QB enclosure. In order to meet the space requirements of the modern construction industry, the enclosure of the QB employs high-efficiency thermoplastic materials. In this way, installation is even easier and more versatile.

The QB enclosure is supplied with a temporary flap to preserve the plasterwork (a3). Standard 2 cm thick polystyrene insulation can be supplied on request to further improve the acoustic and thermal insulation (a2).

QB

WALL-MOUNTED

The WALL-MOUNTED QB continues to be the perfect blend of innovation, technology and design.

A revolution in centralised vacuum cleaning systems

The WALL-MOUNTED QB power unit by Aertecnica is a revolution in centralised vacuum cleaning systems. With its new external covering in high-resistance thermoplastic material (with UV protection), it can also be placed in conventional installation types.

The WALL-MOUNTED QB power unit can also be installed outdoors where there are no fittings for the recessed version. Unlike all other central vacuum unit models, the front access also allows it to be installed just a few cm above the floor.

Together with the possibility of being painted, these features also mean that the NEW WALL-MOUNTED QB can meet the toughest demands in terms of style.

The WALL-MOUNTED QB includes the QB central vacuum unit. Its innovative, patented** elliptical cyclonic filtration system combined with a unique internal design allows dust to be collected in compacted layers, keeping the filter clean and thus reducing the frequency of maintenance.

The QB project takes another step forward in its evolution. Stylish design, compact size, quality materials, excellent performance.

Code **CM3300**

Code **CF3300** | *OPTIONAL*

Rear installation kit for wall-mounted QB in thermoplastic material.

Consisting of:
 self-tapping screws, nuts, washers, hexagonal inserts and caps.
 curved connection Ø50 for dust inlet
 sealing gasket
 Ø50 flange
 plasterwork-protective cap
 brackets for securing the element (x4)

Look figures with type of installation: E - F pag.43

Installation versatility

Possible connections with the DUST INLET line (Suction) and the AIR EXPULSION line (Expulsion).

A. STANDARD:
SIDE dust inlet and
FRONTAL air expulsion

B. STANDARD:
SIDE dust inlet and air
Expulsion DUCTED upwards

C. TOP:
TOP dust inlet and
FRONTAL air expulsion

D. TOP:
TOP dust inlet and air
Expulsion DUCTED upwards

E. REAR: REAR dust inlet and FRONTAL air expulsion

F. REAR: REAR dust inlet and air Expulsion DUCTED upwards

For rear installations, both with the FRONTAL air expulsion (fig. E) and with the UP air expulsion (Fig. F), must be used the rear installation kit for wall-mounted QB in thermoplastic material Cod. CF330Q.

Wall-mounted QB enclosure

Its shape means it can also be installed under brick terrace structures.

If the "rear" connection is used, the installation will be particularly attractive and stylish, as no pipes at all will be visible.

QB

Central vacuum unit

watch the video and see
how QB works

Central vacuum units QB Q200 - CM330Q

The QB Q200 central vacuum unit can be wall-mounted, like normal Tubò central vacuum units, or built-in in a metal enclosure with a reversible hatch installed during the system installation process.

The main features of QB Q200 are:

- Wall-mounted installation, like normal central vacuum units
- Built-in installation
- Installed when the system is being installed
- Vacuum motor with electronic Soft Start, housed in a specific soundproof compartment.

- Electronic circuit board with transformer from 230 to 12 Volts for electric socket line and EC standard compliant EMC anti-interference filter.
- Tangential dust inlet and cyclonic system with deflectors to channel dust into the container.
- Ecological, removable dust collector, equipped with adhesive closing device to guarantee maximum hygiene.
- Washable polyester filter cartridge with large filtering surface area.
- Built-in safety valve.
- Maintenance from the front with a hook mechanism opening system facilitated by magnets to speed up ordinary maintenance operations and provide maximum practicality.

- System for securing the QB Q200 central vacuum unit to its enclosure using a system of screws that operate from inside the central vacuum unit.
- Reduced noise (58 db) and electric protection class IP551* (with channelled air expulsion).

Code	CM8890
Description	Remote panel kit for QB central vacuum units complete with electrical switch plate. Comprised of: <ul style="list-style-type: none"> • Plug socket with indicator n°. 1, • 12V cable for connection to the • Central vacuum unit n°. 1, • Remote panel n°.1, • Mount for remote panel n°. 1, • Vimar Plana electrical switch plate (white granite) n°. 1, • 4 mm thick Plexiglas plate for panel • Remote on Vimar Plana n°. 1

Spare parts Q200 - CM330Q

Code	CM8140*
Description	Biodegradable, eco-friendly cardboard dust container for QB Q200 central vacuum unit (5 pack).

Code	CM833Q*
Description	Washable polyester filter cartridge for QB Q200 central vacuum unit

*Contains protection kit with mask and gloves

TUBO | Pratico

Cleaning has never
been so easy.

watch the video and see
how PRATICO works

Unparalleled practicality.

Faster and simpler cleaning.

PRATICO is a new solution for simplifying the cleaning of rooms equipped with the TUBO centralised vacuum system, making cleaning even easier.

PRATICO is the natural evolution of the TUBO vacuum system. The flexible hose used for cleaning is concealed inside the wall of your home. An entire vacuum system in a single socket.

Pratico is comprised of:

Features

1. Reversible flap that can be painted
2. Reversible PRATICO socket
3. Temporary cover for installation
4. PRATICO socket frame for plasterboard walls

TUBO | Pratico

The advantages of PRATICO

1. **EASY TO USE:** No need to carry, wind-up or put away the hose after cleaning.
2. **FAST:** Even faster cleaning. With a simple gesture the flap is opened, the hose is pulled out and PRATICO is ready to use.
3. **TAKES UP LITTLE SPACE:** The hose is concealed in the wall. There is no need for a cupboard to store it in.

Cleaning has never
been so easy.

PRATICO components

1. 12 metre hose, complete with cover for sliding and protection.
2. End connector for connection to the grip.
3. PRATICO socket complete with flap.
4. Lever for switching on central vacuum unit.
5. Lever for locking hose.

Operation

With PRATICO cleaning has never been so easy.

Just 4 simple gestures are needed to use PRATICO:

1. Open the flap and extract the quantity of hose required for cleaning.
2. Lock the hose using the dedicated lever.
3. Switch on the central vacuum unit by moving the BLUE lever to ON.*
4. Insert the end connector for the hose into the grip.

Another 4 simple operations are required to conceal PRATICO:

5. With the central vacuum unit still operating, approach the socket and release the grip from the hose.
6. Unlock the hose by moving the lock lever.
7. Obstruct the end connector for the hose with the palm of your hand until it is completely rewound.
8. Switch off the central vacuum unit by closing the flap.*

Quick, easy, clean: Pratico.

*NOTE: the PRATICO Wireless system is also available, in the event that electrical wiring was not laid during the installation of the system.

Dispositions for system design

- It is advisable to install PRATICO in a central position in order to cover the largest area possible. Several PRATICO sockets can be installed for cleaning large spaces.
- PRATICO can only be used on systems with a single operator.
- PRATICO is compatible with the conventional TUBÔ system, allowing for the creation of mixed systems.
- PRATICO is reversible.
- PRATICO can be installed both in masonry walls and plasterboard walls.
- The Ø 2" rigid pipe must have an overall length greater than one metre longer than the hose inside it.
- PRATICO can be installed in the floor or in a false ceiling, with Ø 2" (Ø 50.8 mm) TUBÔ piping and wide radius curves.
- In order to optimise and improve the sliding action of the hose inside the Ø 2" rigid pipe, it is essential to install the system with as few curves as possible and in any case with no more curves than those provided in the PRATICO installation set.
- The central vacuum unit should be selected based on the number of PRATICO sockets installed, as shown in the table below.

N°. PRATICO	Central vacuum unit model
1 PRATICO	QB/TS2
1 - 2 PRATICO	TX3A - TP3A - TP3 - TC3 TX4A - TP4A - TP4 - TC4 - TS4
3 - 4 PRATICO	TX4A - TP4A - TP4 - TC4
3 - 4 PRATICO	X-PERT RT: RT1A - RT2MA* - RT2A* <i>*Just 1 operator (user)</i>

Pratico is comprised of:

1. Reversible flap that can be painted
2. Reversible PRATICO socket
3. Temporary cover for PRATICO socket frame
4. PRATICO socket frame for plasterboard walls

PRATICO installation set

Code TR31PR

Installation set with 1 Ø 2" PRATICO socket for plasterboard walls

Comprised of:

Professional
sector

TUBO | X-PERT RT

It provides aspiration everywhere.

X-PERT RT has created to offer an even broader and more versatile line of products.

X-PERT RT is designed to be used as an alternative to the conventional range for residential applications where higher levels of performance and power are required.

X-PERT RT is *used in the residential advanced or tertiary sector*. X-PERT RT offers the same features as central vacuum units designed for the service sector, but with the compact size and pleasant appearance of residential sector units.

X-PERT RT offers excellent levels of performance and is built in compliance with Aertecnica's quality standards.

X-PERT RT is therefore the product bridging the gap between the residential and tertiary sectors, capable of adapting to different needs and will be used in: hotels, Bed & Breakfast, villas, gyms, offices, restaurants, clinics, etc., where at most 2 simultaneous operators are required and the surfaces are not too extensive.

Since it is such a versatile product, we always recommend that you seek advice from our technical Office, or one of our sales consultants for a safe and correct choice.

X-PERT RT is a multifunctional range, suitable for demanding customers that choose and appreciate the quality of Aertecnica products.

Main features

- Installation and set-up system employing Plug & Play technology. Rapid connection is made possible thanks to the electrical connectors and terminals included in the installation set. This eliminates any possible errors with electrical connections.
- All models are provided complete with the APF filter self-cleaning System (a filter self-cleaning system patented by Aertecnica).
- Filter cartridge with large filtering surface area: 20,000 cm², made from washable polyester.
- Electronic vacuum regulation: RT2A and RT2MA models only.
- Instant AVI display.
- Compensation Valve included: RT1A model only.
- Small size with high levels of performance.
- Ergonomic and easy-to-use dust container release handle.
- 66 Lt. Dust Container with "Quick Scroll" system with wheels

Ideal for:

X-PERT RT is the central vacuum unit which bridges the gap between the residential and tertiary sector. It can be installed in different kinds of structures:

Hotels: even with a number of floors, when you decide to use one central vacuum unit on each floor **; bed & Breakfast*; villas*; gyms*; offices*; restaurants*; clinics*; etc...

* All these facilities must require a maximum of 2 operators working at the same time.
** In the case of multi-storey Hotels, max. 2 operators working concurrently on the same floor.

*APF System*** standard fitting on all models

The central power unit is equipped with a self-cleaning system (Aertecnica patent) which allows the dust removal through vibration filter. This extends the regeneration/replacement time of the filter cartridge.

APF SELF-CLEANING ACTIVATION MODE

The daily self-cleaning process can be set according to one of the procedures below:

- 0 - APF disabled
- 1 - Activation of a daily APF cycle
- 2 - Activation of two daily APF cycles
- 3 - Activation of three daily APF cycles
- 4 - 30 minutes after the central power unit is turned off the APF cycle starts automatically
- 5 - 30 minutes after the central power unit is turned off, the APF automatically starts, only if the 30% saturation threshold of the filter is exceeded.
- 6 - Manual activation of the APF cycle from the keyboard.

Dynamic Control Display

Code CMT800*

Description Dynamic Control Display

Selecting Modbus mode allows you to use the Dynamic Control Display with the following central vacuum units: PERFETTO INOX TXA-PERFETTO TPA-PERFETTO TP-CLASSIC TC. Selecting LM (Local Memory) mode allows you to use the Dynamic Control Display with the following central vacuum units: QB-STUDIO TS-C500. Compatible with the electrical switch plates of the most prestigious brands available on the market. Electrical switch plate not included.

* The AVI display is only supplied with the Perfetto Inox TXA, Perfetto TPA and TP central vacuum units

My Tubò + TUBÒ | Link

TUBÒ | Link dialogues with the Free My Tubò app for smartphones and tablets.

AERTECNICA has always created trends and continuously developed consumer products advanced reflecting the needs and demands of its customers. Smart Home technology is the latest trend of an evolved market and TUBÒ | Link represents cutting-edge technology.

REMOTE control

Thanks to My Tubò you can receive notifications on the status of the central vacuum unit or on any problems encountered during its operation in real time. By adding the TUBÒ | Link accessory (cod. CMT820) to your central vacuum unit*, your smartphone will double up as a handy remote control device.

App. My Tubò (free)

HUSAGE history

My Tubò allows you to check quickly the usage history of your TUBò central vacuum unit, for a really control total.

AERTECNICA®
think clean

Tertiary sector

The better you breathe,
the better you work.

TUBÒ has become a featured product also in the workplace. Offices, stores, hotels, restaurants, factories and large structures breathe and become hygienic.

All with extreme simplicity.

Central vacuum units for the Terziary sector

Perfetto and Kompatta KT line

The three-phase Perfetto and Kompatta KT lines are the best solutions for cleaning complex structures (hotels, fitness centres, residences, homes for the elderly etc.). Aertecnica technology and innovation creates highly professional, new tools that guarantee effectiveness and faster, more flexible cleaning for large structures.

- *practicality*
- *easy to use*
- *energy savings*
- *low maintenance costs*
- *several operators at the same time*

The advantages

- Its practicality and power, also in large buildings (e.g. hotels), recover the initial investment in a short period of time.
- It speeds up cleaning times, permitting two operators to work together in maximum silence and comfort.
- Maintenance costs are low, and savings in labour and consumable materials (bags and filters), make its cost a fraction of that for traditional portable vacuum cleaners.
- It is possible to equip the central power unit with a self-cleaning filter system, which reduces maintenance and guarantees improved suction.

The system

The Perfetto line: intelligent technology

The technical features of the three-phase PERFETTO line emphasise its advantages in terms of practicality, simplicity of use, energy savings and reduced maintenance costs.

Consisting of a Vacuum Module and a Dust Separator, which is connected to it. The three-phase PERFETTO line makes it possible for 14 operators to work at the same time thanks to greater suction capacity.

All vacuum modules are sound-proofed and equipped with a display managed by an intelligent electronic circuit board, which monitors the machine status. In addition, the vacuum modules with automatic vacuum adjustment feature **SOFT START**, which guarantees lower energy consumption and a constant operating vacuum level.

The display on the vacuum module can display the following information:

- motor power uptake, in amperes
- the maximum time the vacuum module can remain in continuous use
- the hours of operation of the vacuum module
- the temperature of the motor chamber
- the operating vacuum in mbar

Differently from normal centralised vacuum systems, these vacuum motor modules can be connected to one another using the serial port provided, with no need for dedicated electrical panels. The status of the machine is shown on the displays of each module, as well as on the DYNAMIC CONTROL DISPLAY (optional extra code CMT800), which is installed in operating positions (reception, hallways, control areas, etc)

Vacuum module display

The electronic component on the vacuum modules makes it possible to set and view operating parameters using a display screen.

In the event of central vacuum units with 2 or 3 vacuum modules, one of these modules must always be set to automatic vacuum regulation, and the remaining modules must be set to manual regulation.

This set-up is necessary for proper system operation: the module equipped with automatic regulation will function as the primary motor and will automatically adjust the system's vacuum level until the set level is obtained.

Once the maximum efficiency percentage is obtained, the primary module will activate the secondary module with manual regulation via the serial connection, and will automatically adjust the system's vacuum level to bring it to the set level.

* The air expulsion and inlet vents are reversible (right or left)

Three-phase Perfetto line separators (from 90 to 150 litres) complete structure of the central vacuum unit. They are equipped with a protection system that prevents excessive pressure values and protects the motor using a compensation valve.

Code	Model
CI090	LT90/B
CI090A	LT90/B with self-cleaning function
CI150	LT150/B
CI150A	LT150/B with self-cleaning function

Available with or without the self-cleaning system, they also include displays showing the following parameters:

- dust container filling percentage
- filter cartridge saturation percentage
- compressor cylinder pressure during self-cleaning stage
- operating vacuum in mbar

The version with self-cleaning filters also allows you to program filter self-cleaning cycles with a timer, based on how saturated the filter is.

All three-phase Perfetto line separators have a dust container opening/closing system which, thanks to two pedals at the base of the machine, facilitates emptying and maintenance operations.

Version with self-cleaning system

Components

1. Reversible air outlet
2. Compressed air cylinder
3. Reversible air inlet
4. Bag full sensor
5. Air cylinder recharging compressor
6. Bag tensioner
7. Adjustable support feet
8. Control display
9. Main switch
10. Built-in compensation valve
11. Condensate drain
12. Polyester filter cartridge
13. Dust collection bag
14. Hydraulic dust container opening/closing device

Kompatta KT line

The KT line is based on a "PLUG & PLAY" system; this is why it offers our installation technician the guarantee of total reliability and really fast installation, as well as drastically reducing the amount of occupied space.

The three-phase Kompatta KT line was created to satisfy the needs of the service and professional sectors. Its versatility and highly efficient technical features, designed to make it easier to use, offer solutions targeted towards the needs of an increasingly demanding and evolved market. The machine consists of a single structure divided into three sections:

- Upper section: motor housing.
- Central section: dust filter.
- Lower section: cyclone and storage of the vacuumed material.

The main features of this product are:

- A wide line of 8 different models.
- From one to three operators at the same time.
- Dust filter.
- Dust filter, with a self-cleaning system.
- Mechanical vacuum regulation.
- Electronic vacuum regulation.
- Electrical panel built into the machine body.
- Built-in and sound-proofed compensation valve.

Kompatta KT central vacuum unit

Code	Model	Description
CIKT20M	KT20M	2.6Kw 230V single-phase
CIKT10	KT10	2.2Kw 380V three-phase
CIKT20	KT20	2.2Kw 380V three-phase
CIKT30	KT30	4.2Kw 380V three-phase

Particular attention was placed on guaranteeing silent operation: the use of composite and polyurethane-based materials and the insertion of anti-vibration systems on dynamic parts has considerably reduced the noise level and improved performance and efficiency, bringing them well above standard.

The filter cartridge, made entirely from WASHABLE polyester, has a filtering surface area of approximately 5 m². The self-cleaning system provides for optimal machine operation, limiting pressure drops caused by dirty filter cartridges. The large capacity of the dust container (150 litres), reduces maintenance operations (container emptying).

The Kompatta KT line was designed for our installation technician.

PLUG & PLAY technology simplifies connection to the system's central vacuum unit: the single unit structure is equipped with quick electric connectors and terminals included in the installation set, eliminating any errors when making the electrical connections.

Version with self-cleaning system

Dynamic Control Display : Total control, at a distance

For PERFETTO three-phase central vacuum units for the TUBO system (optional)

This is an electronic device that is positioned in an area other than where the central vacuum unit is installed (e.g. reception, hall, etc...), and is used to automatically reset the system without having to access the machine in the event of a detected anomaly.

The Dynamic Control Display requires an auxiliary 12 Vdc power supply.

It shows:

- correct central vacuum unit operation
- the presence of system faults and blocks
- the temperature of the vacuum turbine
- the operating vacuum

Code	CMT800
Description	Dynamic Control Display Selecting TRbus mode allows you to use the Dynamic Control Display with the following central vacuum units exclusively: PERFETTO three-phase. Compatible with the electrical switch plates of the most prestigious brands available on the market. Electrical switch plate not included.

Complementary accessories for three-phase central vacuum units

A silencer is essential in every central vacuum unit. It should be installed on the air expulsion pipe, near the grille: the type of silencer is chosen based on the diameter (Ø) of the expulsion pipe. A silencer with a diameter larger than the outlet diameter of the central vacuum unit is recommended for expulsion lines longer than 6 metres.

C1360	Metal silencer Ø 63 (Dimensions: height 50cm x Ø15)
C1365	Plastic silencer Ø 63 (Dimensions: height 36cm x Ø15)

C1380	Metal silencer Ø 80 (Dimensions: height 70cm x Ø17)
C1385	Plastic silencer Ø 80 (Dimensions: height 56cm x Ø15)

C1390	Metal silencer Ø 100 (Dimensions: height 70.5cm x Ø20)
C1397	Metal silencer Ø 160 (Dimensions: height 90.5cm x Ø22)

The check valve or non-return valve is a valve that allows the air in the vacuum system to flow in a single direction only.

C1561	Check valve for TR10S-M20ES-T20ES
C1581	Check valve for TR20S-T30ES
C1591	Check valve for TR30S-TR40S

N.B. The silencers and check valves for the three-phase central vacuum units are supplied complete with rubber sleeve and metal clamps for connection

TUBO
Airway to Comfort®

Each to his own socket...

AerTECNICA's line of vacuum sockets, elegant and suitable for any environment, offers designs and colours that can be perfectly combined with the main brands of electrical switch plates available on the market. Discover the full line of sockets at:

www.aertecnica.com

The socket is opened instantly and the hose can be easily inserted. Closing the socket is just as easy and safety is guaranteed by a seal that prevents any dust from escaping.

Easy and safe

The New Air socket body is compatible with all major electrical switch plate brands. The switch plates are not supplied by AerTECNICA, but are available from any electric parts reseller.

To use the TUBÒ vacuum system, just insert the practical and light-weight hose into any of the vacuum sockets positioned throughout the house.

The socket is opened instantly and the hose can be easily inserted. Closing the socket is just as easy and safety is guaranteed by a seal that prevents any dust from escaping.

The reasons behind the success of Aertecnica sockets

Aertecnica registered its first patent in Italy in 1992, revolutionising the market of sockets for Central Vacuum System vacuum systems.

- Captivating design
- Compatible with all major brands of electrical switch plates
- Easy ergonomic opening
- Solid and robust
- Long life

Technological excellence

From a technical point of view, Aertecnica was the first company to resolve the problem of perfectly fastening the socket to the wall. Made from high quality thermoplastic materials, the Air sockets, now called New Air sockets, are sufficiently robust and rigid to prevent any flexion that could cause air leaks in the system. The OR dual seal ensures perfect contact between the socket and socket frame, even in the event that the socket frame is not perfectly flush with the plasterwork. All these features ensure the vacuum system works perfectly.

Only for central vacuum units: PERFETTO INOX TXA – PERFETTO TPA – PERFETTO TP – CLASSIC TC – QB – STUDIO TS – BRAVO – PERFETTO – PERFETTO INOX – C500. Can be used with NEW AIR – LOGIK NEW AIR – SQUARE – PA455 – ECLETIS – NEW AIR TOUCH vacuum sockets

Wireless

image	code	product
	CM188T	9 m complete flexible hose Ø32 with ergonomic handle and transmitter for wireless system for starting/stopping monophase central power unit Perfetto – Perfetto Inox – Classic – Studio – Studio TS – Silver – Perfetto Inox TXA – Perfetto TPA – Perfetto TP – Classic TC- Wall enclosure QB Flexible hose with an ERGONOMIC handle and transmitter. Compatible just for new generation Perfetto Inox TXA – Perfetto TPA – Perfetto TP – Classic TC and Perfetto Inox – Perfetto – Classic – Studio – Silver central power units. To be used in systems without electrical connection to vacuum sockets as an additional hose combined with wireless kit code CM186 and CM187 or CM186T – CM187T – CM189T. Just Flexible hose without receiver.

image	code	product
	CM187T	Wireless kit for starting/stopping the monophase central power unit Perfetto Inox TXA - Perfetto TPA - Perfetto TP - Classic TC, complete with receiver and 9 mt flexible hose Ø32, with ergonomic handle and transmitter. The kit includes n. 1 Flexible hose with an ERGONOMIC handle and transmitter and n. 1 receiver. Compatible just for new generation Perfetto Inox TXA - Perfetto TPA - Perfetto TP - Classic TC central power units.
	CM186T	Wireless kit for starting/stopping the monophase central power unit Perfetto - Perfetto Inox - Classic - Studio - Studio TS - Silver, complete with receiver and 9 mt flexible hose Ø32, with ergonomic handle and transmitter. The kit includes n. 1 Flexible hose with an ERGONOMIC handle and transmitter and n. 1 receiver. Compatible just for Perfetto - Perfetto Inox - Classic - Studio - Studio TS - Silver central power units.
	CM189T	Wireless kit for starting/stopping the monophase central power unit WALL enclosure with QB Q200, complete with receiver and 9 mt flexible hose Ø32, with ergonomic handle and transmitter. The kit includes n. 1 Flexible hose with an ERGONOMIC handle and transmitter and n. 1 receiver. Compatible just for WALL enclosure with QB Q200 central power unit.

Accessories for hoses

image	code	product
	AP332	Metal hook for holding hose and TUBÓ Easy Sack Dimensions: 20x15.5x14 cm (WDXH)
	AP385	Complete protection set for Ø 32 7m hose
	AP388	Complete protection set for Ø 32 9m hose This cover prevents the formation of small scratches or marks that may be caused by the hose during cleaning. The Tubò protective sleeve protects furniture, railings, walls, skirting boards and floors in the home. Made from a soft, strong and washable material, it contains a small percentage of Lycra, which provides the right amount of elasticity for it to follow the movement of the hose. To improve insertion the sleeve is provided with a special accessory for installation.
	AP318	Advanced chrome-plated telescopic extension Ø32 Maximum length: 99 cm
	AP320	Plastic telescopic extension Ø 32 Maximum length 99 cm

Spare parts for hoses

image	code	product
	AP305	Ø 32 7m hose
	AP307	Ø 32 9m hose
	AP306	Ø 32 hose in 21m pack (per m)
	AP313	Ø 32 swivel activating connector, pipe-socket Conductive material.
	AP310	Ø 32 extension connector Used to join two hoses. To be purchased together with code AP313
	AP315	Ø 32 curved plastic connector, with pressure regulator Ergonomic connector
	AP811	Chrome curve connection Ø32 QUICK FLOW with switch Only for electrified Quick Flow hose with regulator of pressure (code AP233 – code AP238)
	AP911	ØChrome curved connection Ø32 QUICK FLOW with switch for starting central vacuum cleaner and variator of speed. Only for electrified Quick Flow hose with speed variator (code AP234 – code AP239)

Spare parts for WIRELESS Hoses Ø32

image	code	product
	CM183T	Ergonomic handle for Ø32 flexible hose with pressure regulator and wireless transmitter (codes AP12PR – AP15PR – CM186T – CM187T – CM188T – CM189T) Ergonomic handle with pressure regulator and wireless transmitter, NOT INCLUDED: Receiver and flexible hose
	CM184T	Wireless start-up/stop kit for central power unit models TXA -TPA -TP- TC (complete with receiver and ergonomic handle) (Without flexible hose) Kit complete with receiver and ergonomic handle Without flexible hose Just for central power unit models TXA -TPA -TP-TC. Compatible with PRATICO
	CM181T	Wireless kit for starting/stopping the central power unit WALL enclosure with QB Q200, complete with receiver (Without flexible hose) Kit complete with receiver and ergonomic handle – Without flexible hose Just for central power unit WALL enclosure with QB Q200

Ø 32 brushes and cleaning accessories

image		code	product
		AP331	Ø 32 brush for clothing The soft bristles on this brush make it perfect for deep-down cleaning without scratching. The bristles are softer, more effective and longer-lasting than synthetic bristles.
		AP334	Ø 32 jointed dusting brush The soft bristles on this jointed dusting brush are perfect for cleaning very delicate surfaces or objects (e.g. lampshades), without scratching. It is ideal for cleaning small surfaces such as windowsills and upholstery. The jointed brush allows you to clean more easily thanks to its rotation
		AP335	Ø 32 dusting brush
		AP337	Ø 32 radiator brush Can be used only with crevice brush code AP342
		AP340	Ø 32 brush for mattresses and upholstery with felt A brush specifically designed for deep-cleaning mattresses and upholstery, sofas and padded furniture in general.
		AP341	Ø 32 brush for mattresses and upholstery
		AP342	Ø 32 crevice brush A specific brush for cleaning cracks, gaps and small spaces; also suitable for cleaning cars.

image		code	product
 		AP345	Ø 32 30 cm universal floor brush with castors and bristles For replacement bristles order code AP810
		AP348	Ø 32 37 cm universal floor brush with castors and bristles For replacement bristles order code AP815
* Ideal brush for cleaning tiles and floors in PVC, terracotta and linoleum. Thanks to its stiff bristles, the dust is brushed out of all cracks and gaps in the floor.			
 		AP346	Ø 32 30 cm universal floor brush with castors and bristles
 		AP353	Dual use floor and carpet brush with displacement wheel Ø 32 Premium brush with wheels, suitable for use on floors (with the bristles extracted) and on carpets (with the bristles retracted).
 		AP329	Ø 32 26.5cm floor and carpet brush with castors
 		AP333	Ø32 30cm Flexible Curves jointed brush, dual use - vacuums and polishes, for tiles and wood A brush with natural bristles for all surfaces, particularly suitable for cleaning tiles and wooden floors. It is made special by the built in micro-fibre cloth, which cleans and polishes the floor at the same time. The 180° joint allows you to clean in narrow spaces (e.g. between furniture). To replace the micro-fibre cloth order code AP336
 		AP338	Ø 32 30cm brush for wooden floors, with natural horsehair bristles and castors in felt A brush with soft natural horsehair bristles and felt castors, particularly well suited for cleaning wooden floors and other delicate smooth flooring.
 		AP350	Ø 32 upholstery turbo-brush A perfect brush for cleaning carpets and rugs. The rotating bristles and belt are driven by the suctioned air to create a turbo effect that cleans deeply. The bristles have a special roller shape and are able to lift dust trapped in the fibres of carpets, fabrics and rugs, not only cleaning them but making them like new.
 		AP344	Double use brush Ø 32 for wooden floor with felt and for universal flooring, cm. 25 For replacement bristles order code AP809

code

product

AP347

Ø32 polishing and suction brush designed for wooden floors.
To replace micro-fibre fringe order code AP339

AP363

Ø 32 brush with bristles for pets, KA
To be used with connector code AP370.
For pets with long fur.

AP366

Ø 32 long brush for pets, ST
To be used with connector code AP370.
For pets with short fur.

AP369

Ø 32 short brush for pets, KAM
To be used with connector code AP370.
For pets with short fur.

AP370

Connector for fitting brushes for pets directly onto Ø 32 hose
Applicable only to codes AP220, AP225, AP305, AP306 and AP307.

AP349

Ø 32 30cm brush for liquids with rubber scraper, without castors
In order to use this brush, you must connect it to liquid vacuum fitting Code AP372 – AP373

AP351

Ø 32 28cm carpet turbo brush with castors

AP373

Ø 32 16l plastic water separator c/w accessories
Purchase of a dedicated hose is recommended: Code AP220 or AP225.
Contains hose for connection to the vacuum socket, plastic pipe pair extension and brush for liquids.
Dimensions: 41x41x56 cm (WDXH) | Weight: 5.8 Kg

Designed to vacuum dust, thanks to the liquid suction fitting TUBO is transformed into an all-round cleaning tool. The liquid suction fitting is suitable for public spaces, toilets and outdoor areas in general. It can be used to vacuum any type of liquid as well as for ensuring optimal cleaning after having washed the floor. Thanks to its four pivoting castors, it can move easily in any direction. The pack also contains a connection pipe to the vacuum socket, a plastic pipe pair extension and a dedicated brush for liquids. It can only be used with hose codes AP220 – AP225 (purchase of a dedicated hose is recommended).

Other accessories and spare parts for Ø32 brushes and hoses

VROOM cleaning accessories kit

Code AP286

VROOM cleaning accessories kit

Vroom, a modern and convenient cleaning accessory that integrates perfectly with the Tubò system. Vroom is practical, silent and invisible, ideal for quickly cleaning small spaces and for heavily used parts of the home such as the kitchen, bathroom and laundry area. Its immediate accessibility makes it extremely helpful for everyday cleaning. Vroom automatically switches the Tubò central vacuum unit on and off to make cleaning even easier - just extract the hose coiled inside Vroom and you are ready to clean. Recommended for installation inside cupboards and standard cabinets, it may be hidden from view but it is there when you need it. It is perfect for everyday use, at any time of day.

"VROOM" is comprised of a 5m hose concealed in a dedicated container connected to the vacuum system, an extension, a dusting brush and an installation kit.

Comprising:
Mounting Kit, telescopic wand, Dusting brush. Compatible with
HANDY service socket frame Ø50 cod. PA050

Ø 40 hoses

Use in industrial plants.

Standard Ø 40

image	code	product
	AP412	Ø 40 10m hose To form a complete Ø 40 hose use: 1 Ø 40 hose (code AP412 or AP406); 2 Ø 40 plastic pipe connectors (code AP407) and 1 Ø 40 chrome-plated curved connector (code AP411).
	AP406	Ø 40 hose in 20m pack (per m) To form a complete Ø 40 hose use: 1 Ø 40 hose (code AP412 or AP406); 2 Ø 40 plastic pipe connectors (code AP407) and 1 Ø 40 chrome-plated curved connector (code AP411).

Ø 40 anti-static hose

image	code	product
	AP413	10m Ø 40 anti-static hose with ground wire To form a complete Ø 40 anti-static hose use: 1 Ø 40 anti-static hose (code AP413) + 2 Ø 40 aluminium pipe connectors (code AP409) and 1 Ø 40 chrome-plated curved connector (code AP411).
	AP414	10m anti static black flexible hose Ø 40 To form a complete antistatic flexible hose Ø 40 use: 1 antistatic flexible hose Ø 40 (code AP414); 2 aluminium hose unions Ø 40 (code AP409) and 1 chrome-plated curved union Ø 40 (code AP411).

Brushes, accessories and spare parts for Ø 40 hoses

Use in industrial plants.

Ø 40 replacement pipes

image	code	product
	AP407	Ø 40 plastic socket pipe connector To form a complete Ø 40 hose use: 1 Ø 40 hose (code AP412 or AP406) + 2 Ø 40 plastic pipe connectors (code AP407) + 1 Ø 40 chrome-plated curved connector (code AP411).
	AP411	Ø 40 chrome-plated curved connector To form a complete Ø 40 hose use: 1 Ø 40 hose (code AP412 or AP406) + 2 Ø 40 plastic pipe connectors (code AP407) + 1 Ø 40 chrome-plated curved connector (code AP411).
	AP410	Ø 40 plastic extension connector Used to join two Ø 40 hoses. To be purchased together with plastic socket pipe connector code AP407
	AP409	Ø 40 aluminium hose-socket connector Use only in combination with Ø 40 anti-static hose with ground wire (code AP413)

Ø 40 accessories

image	code	product
	AP470	Ø 40 to Ø 32 accessory adapter Used to adapt Ø 40 accessories to Ø32 extension and curved connector (except for codes AP442, AP434, AP444)

Bags

image	code	product
	CM807	Bags with closure for M03/1, M03/1TF, SM20FD, SX20FD, SM30TD, SX30TD (pack of 10)
	CM812	Bags with closure for SC20FC, SX20FC, SC30TC, SC40TB, SX40TB, SC60TB, SC70TB, M04/2 (pack of 10)
	CM818	Bags with closure for SC40TA, SC60TA, SC70TA, SX70TA, M05/2, M05/3, M05/4, LT40 (pack of 10)
*Contains protection kit with mask and gloves		
	CM806	Bags with closure and bag tensioner for P80, PX80 (pack of 10)
	CM808	Bags with closure and bag tensioner for PX85 (pack of 10)
	CM811	Bags with closure and bag tensioner for P150, P250 (pack of 10)
	CM813	Bags with closure and bag tensioner for PX150, PX250 (pack of 10)
	CM817	Bags with closure and bag tensioner for P350, P450, PX450 (pack of 10)
*Contains protection kit with mask and gloves		

Clean Bags

image	code	product
	CM984	CLEAN BAGS with air-tight closing system for central vacuum units TX1A, TP1A, TP1, TX2A, TP2A, TP2 (pack of 5)
	CM985	CLEAN BAGS with air-tight closing system for central vacuum units TX3A, TP3A, TP3, TX4A, TP4A, TP4 (pack of 5)
* The air-tight seal closure of the Clean Bag avoids direct contact with dust.		

Polyester filter cartridges

image	code	product
	CM830	Washable polyester cartridge for PX450, P350, P450, SC40TA, SC60TA, SC70TA, SX70TA Dimensions: 44 cm H x Ø18 cm
	CM831	Washable polyester cartridge for M05/2, M05/3, M05/4 Dimensions: 45 cm H x Ø22 cm
	CM832	Washable polyester cartridge for PX80, PX85, P80, C80, S80, TS1, TS85, SM20FD, SX20FD, SM30TD, SX30TD Dimensions: 18 cm H x Ø13.2 cm
	CM828	Washable polyester cartridge for S100, S150, S250, TS2, TS4, TS105, SC20FC, SX20FC, SC30TC, SB20FE, SB30TE, SB60TE, M03/1, M03/1TF, M04/2, 32U/31, 32U/42, 32U/43, 32U/53, 32U/54 Dimensions: 34 cm H x Ø13.5 cm
	CM829	Washable polyester cartridge for PX150, PX250, P150, P250, C150, C250, C500, SC40TB, SX40TB, SC60TB, SC70TB Dimensions: 34 cm H x Ø18 cm
*Contains protection kit with mask and gloves		

Polyester filter cartridges *PRECISION*

image	code	product
	CM981	Washable PRECISION polyester filter cartridge for TX1A, TP1A, TP1, TC1 Dimensions: 10 cm H x Ø16 cm
	CM982	Washable PRECISION polyester filter cartridge for TX2A, TP2A, TP2, TC2 Dimensions: 20 cm H x Ø16 cm
	CM983	PRECISION Washable polyester cartridge for TX3A, TP3A, TP3, TC3, TX4A, TP4A, TP4, TC4 Dimensions: 30 cm H x Ø16 cm
*Contains protection kit with mask and gloves		

Spare parts for QB and BRAVO central vacuum units

image	code	product
	CM833Q	Washable polyester filter cartridge for QB Q200 central vacuum unit
*Contains protection kit with mask and gloves		
	CM814Q	ECOBIX biodegradable cardboard dust container for QB Q200 central vacuum unit (5 pack)
*Contains protection kit with mask and gloves		
image	code	product
	CM980	Filter bag for BRAVO (5 pack).

Spare parts for Professional

Bags

image	code	product
	CI825	Bags for X-pert RT RT1A, RT2MA, RT2A central units (20-pcs pack)
*Contains protection kit with mask and gloves		

Cartridges

image	code	product
	CI884	Washable polyester filter cartridge for X-pert RT RT1A, RT2MA, RT2A Dimensions: 61.3 cm H x Ø22 cm
	*Contains protection kit with mask and gloves	

Spare parts for Tertiary

Bags

image	code	product
	CI810	Bags for separators LT70/A, LT70/B (20 pack)
	CI816	Bags for separators LT100/A, LT100/B, LT90/B and central vacuum units K100, K100A, K200, K200A (20 pack)
	CI820	Bags for separators LT150/A, LT150/B and KOMPATTA KT central vacuum units (20 pack)
*Contains protection kit with mask and gloves		

Cartridges

image	code	product
	CI880	Washable polyester filter cartridge for separator LT40/A, LT70/B with filter self-cleaning, LT 70/B without filter self-cleaning Dimensions: 61.3 cm H x Ø22 cm
	CI870	Washable polyester filter cartridge for separator LT100/A, LT100/B with filter self-cleaning, LT 100/B without filter self-cleaning Dimensions: 61.3 cm H x Ø27 cm
	CI864	Washable polyester filter cartridge for separator LT150/A with filter self-cleaning BIA USGC, LT200 Dimensions: 61 cm H x Ø32.5 cm
	CI881	Washable polyester filter cartridge for separator LT90/B with filter self-cleaning, LT90/B without filter self-cleaning, central vacuum units K100, K100A, K200, K200A, KOMPATTA KT line Dimensions: 40 cm H x Ø32 cm
	CI882	Washable polyester filter cartridge for separator LT150/B with filter self-cleaning Dimensions: 50 cm H x Ø32 cm
	CI883	Washable polyester filter cartridge for separator LT150/A Dimensions: 68,3 cm H x Ø35 cm
*Contains protection kit with mask and gloves		

ROBÒ

TR800

A truly trustworthy assistant.

The perfect partner
for all central
vacuum systems.

The features of an irreplaceable assistant.

KIT ROBÒ TR800 is the new frontier of TUBÒ, Aertecnica's central vacuum system.

It is the only vacuum cleaning and floor washing robot with the automatic emptying of the dust directly into the central vacuum system.

Compatible with all central vacuum systems

KIT ROBÒ is the perfect complement for any central vacuum system. Its Automatic base with Plug and Play technology is compatible with all the vacuum sockets** in the house, from the top floor to the bottom floor. Cleaning is always under control!

It is the best house helper

It is the one which does not make its presence felt. ROBÒ was created for this purpose: it can be activated also with a remote control thanks to the special App, its cleaning schedule can be programmed at any time during the day and

it can be left to act completely autonomously and silently, even when there is nobody at home.

Its battery guarantees a long life. ROBÒ is truly a trustworthy assistant: because time is precious.

The main advantages

- The Automatic base is installed with Plug and Play technology for immediate use, it has been designed to be used on its special TUBÒ configuration but not only on that one, it can also be installed on all existing TUBÒ vacuum cleaners, but also on those of other brands. Simply position the recharging station in the special seat of the self-cleaning base, then insert the activating connector in the suction socket and connect the charger to a power socket and cover with the specific pipe the connection between the suction socket and the self-cleaning base.

- The exclusive self-cleaning system SCR (Self-Cleaning ROBÒ) of the set formed by ROBÒ and self-cleaning base connected to TUBÒ multiservice (or to any other central vacuum system) drastically reduces the maintenance of the robot discharging directly to the central vacuum unit the collected dust and microdust removing them completely from the cleaned surfaces. In this way nobody will ever come into contact with the dirt.

The self-cleaning system (SCR) Self-cleaning ROBÒ does not limit itself to emptying the dust container but at the same time it cleans the filters and the main brush which during the self-cleaning cycle comes into operation with microrotations which minimise the accumulation of dirt facilitating the removal of the material present in the dust container. In this way, the self-cleaning system (SCR) Self-Cleaning ROBÒ guarantees an optimal working of ROBÒ for long periods also keeping it ready for use with maximum efficiency. The main brush, with bristles and spatulas has a helicoid shape which reduces the wrapping around of fibres, hair, etc.

- ROBÒ is small: its height allows to pass under spaces of 8 cm. While its height on the recharge base is 13 cm, ideal for installation in spaces with minimum heights which are not less than this (under kitchen furniture, closets, etc.).

And in cases of existing buildings, without central vacuum units?

In many cases one can benefit from the great advantages provided by TUBÒ and its pairing with ROBÒ, first and foremost the one concerning health, with minimal interventions also in existing and not prearranged homes. Many residences and apartments have construction characteristics which include balconies, best if servicing the kitchen area but also other areas, that with a simple through hole in the external wall, enable to install a central vacuum unit outdoors and to use a vacuum socket indoors, with different solutions that in any case ought to be tested on a case-by-case basis.

In this way, besides the well-known advantages of the TUBÒ central vacuum system you can also benefit from all the advantages of the brand new ROBÒ KIT.

On the right, one can see an example of how an installation could be made with a simple through hole on the external wall.

There are TUBÒ central vacuum units for any requirement, also smaller, ideal for outdoor use on balconies or terraces.

* It is recommended to regularly check that the central brush is free from obstacles such as, for example, hair or strands which may reduce the effectiveness of cleaning. The frequency of the check may vary depending on the type of floor.

** For vacuum sockets different from those with connections (which activate the central vacuum unit with the insertion of the operating hose) find the most suitable solution beforehand.

Cleaning? As simple as breathing.

Automatic emptying of dust with a connection to the central vacuum system.

At the end of operation ROBÒ returns to the self-cleaning base, it places itself on the connections of the recharge base and sets off its internal self-cleaning. This activates the process which rotates the main roller brush with synchronised jerks and switches on the central vacuum unit of the TUBÒ system long enough to ensure the emptying of the dust container, the reconditioning of the filters and brushes.* A special internal deflector, combined with the exclusive airflow pipe system, ensures that the ROBÒ dust container is always clean.

ROBÒ will always be ready for use, avoiding any contact with the dust.

Connection to the vacuum sockets

The connection of the KIT ROBÒ self-cleaning base to the TUBÒ multiservice always takes place in the same way, by connecting the self-cleaning base to a specially made or existing vacuum socket. However, in the case of existing installations there are some small variations which depend on the different models of suction sockets available on the market and their type of connection to the central vacuum unit.

KIT ROBÒ's self-cleaning base has been designed to adapt to the different types of vacuum socket models available on the market.**

DOWNLOAD
THE APP

Rotating wheels

Recharge connections

APP TUBÒ|ROBÒ

Via the **special APP**, you can

- start or end the cleaning also when you are not at home;
- view the cleaning cycles' history;
- programme the cleaning (daily or weekly);
- adjust suction power.
- adjust the quantity of water released during cleaning;
- activate or deactivate the automatic self-cleaning function;
- search for the ROBÒ when it has not returned to the recharging station;
- select the cleaning mode.

INTELLIGENT NAVIGATION

Thanks to the **magnetic tape** it is possible to delimit the areas to which ROBÒ must not have access.

ALL-ROUND CLEANING

It is **ROBÒ's high efficiency HEPA and Sponge filter and dust container** that are truly responsible for the cleaning operations. For this reason, they both self-clean automatically at the end of each cycle.

Thanks to the integration with the TUBÒ central vacuum system, cleaning well also means breathing clean air!

In the TUBÒ | ROBÒ TR800 package you will find:

- A** ROBÒ TR800 Robot vacuum cleaner and floor washer
- B** Docking Station
- C** Water tank for floor washer + 1 spare microfibre Mop
- D** 2 additional edge cleaning brushes
- E** ROBÒ magnetic tape
- F** Battery charger
- G** HEPA filter + sponge filter
- H** Cutter-comb for brush maintenance

The kit interfacing with the central vacuum system must be purchased separately (connectors and flexible hose for the vacuum socket and ROBÒ's recharge base).

AGAINST MICRO WASTE AND ALLERGENS

The suction power and the accuracy of **ROBÒ's edge cleaning brushes** enable to remove even the smallest waste like crumbs or animal hair. The air inside the home will be free from potential allergens.

COMPATIBLE WITH ANY CENTRAL VACUUM SYSTEM

KIT ROBÒ discharges the collected dust and microdust directly into the central vacuum system. Rotating wheels in this way one never comes into contact with the dirt.

TECHNOLOGY WITHOUT OBSTACLES

Robot is equipped with shock and fall arrest sensors which enable it to detect any obstacles or danger zones. You just have to let it work!

Fall arrest sensors

ON EVERY SURFACE

ROBÒ is a friend of all surfaces and with its **wheels allowing movement** it passes fearlessly on carpets and floors of all kinds: tiles, stone, linoleum. With the certainty of an ever accurate cleaning.

BRUSHES FOR ANY REQUIREMENT

The **main roller brush**, with rubber bristles and spatulas has a helicoid shape in order to avoid the wrapping around of fibres, hair, etc. Moreover, it is not necessary to change it to clean different types of floors.

Microfibre Mop for floor washing

INTEGRATED FLOOR WASHER

Double function, perfect cleaning of the home and of the air. After vacuum cleaning, simply replace the dust container with the floorwashing water tank to allow ROBÒ to clean the floors. The Mop can be safely washed in the washing machine.

Water tank for floor washer

Kit ROBÒ TR800

Automatic Plug and Play for traditional vacuum system

Code KTR800A	For central vacuum systems TUBÒ or others
Including:	
1	ROBÒ TR800 with dust container complete with deflector and brushes
1	Tank with water doser for floor washer with microfibre cloth
1	Microfibre cloth for floor washing
2	Edge cleaning brushes (1 rt + 1 lt)
1	Sponge filter
1	HEPA filter
1	Recharge base
1	Charger
1	Cutter comb for brush maintenance
1	Magnetic tape 1m
1	Use and maintenance manual Robò RT800
1	Self-cleaning base
1	Socket protection cover
1	Curved frame kit
1	Universal connector with connection lead
1	Connection lead 1m
1	Flexible hose d.25 for connection 1.35m
1	Base tube gasket
1	Coupling gasket
1	Installation guide for KIT KTR800A

Optional Technical Spare Parts

ATR801	Robò remote control
RTR804	Dust container complete with deflector and filters
RTR806	Water tank for floor washer with doser 3 microfibre cloths (Mop)
ATR802	Magnetic tape 1m
RTR807	Battery recharging station including charger
RTR808	Battery

Spare parts Consumables

RTR801	Cutter comb for brush maintenance
RTR802	Spare brushes kit for Robò: 1 main brush + 2 side brushes
RTR805	Microfibre cloth for floor washing (Mop), 3 pcs.
RTR809	Spare parts kit for filters 1 main filter + 1 sponge filter + 1 HEPA filter
